

```
Eigen::internal::sparse  
_eval< T, traits< T >  
::RowsAtCompileTime, traits  
< T >::ColsAtCompileTime,  
traits< T >::Flags >
```

The diagram illustrates an inheritance relationship between two Eigen template classes. A light gray box at the top represents the base class, `Eigen::internal::sparse_eval< T, traits< T >::RowsAtCompileTime, traits< T >::ColsAtCompileTime, traits< T >::Flags >`. A darker gray box at the bottom represents the derived class, `Eigen::internal::eval< T, Sparse >`. A blue arrow points from the top of the derived class box to the bottom of the base class box, indicating that `eval` inherits from `sparse_eval`. Both boxes are divided into three horizontal sections, with the top section containing the class name and the other two sections being empty.

```
Eigen::internal::eval  
< T, Sparse >
```
