

Eigen::internal::functor
_traits< std::equal_to< T > >

```
graph BT; A["Eigen::internal::functor< numext::equal_to< T > >"] --> B["Eigen::internal::functor< std::equal_to< T > >"]
```

The diagram illustrates a C++ inheritance hierarchy. At the bottom is a white box representing the `numext::equal_to` functor. Above it is a gray box representing the `std::equal_to` functor. A blue arrow with an open triangle head points from the top of the white box to the bottom of the gray box, indicating that `numext::equal_to` inherits from `std::equal_to`. Both boxes are divided into three horizontal sections, with the first section containing the functor's name and the remaining two sections being empty.
