

```
Eigen::internal::functor  
_traits< std::not_equal  
_to< T > >
```

The diagram illustrates a C++ inheritance chain. At the bottom is a white box representing the `numext::not_equal_to` trait. A blue arrow points upwards from this box to a gray box above it. The gray box represents the `Eigen::internal::functor_traits` specialization for `std::not_equal_to`. The gray box is divided into three horizontal sections: the top section contains the trait name, and the two bottom sections are empty.

```
Eigen::internal::functor  
_traits< numext::not_equal  
_to< T > >
```
