

Eigen::internal::igamma
_retval< Scalar >

```
graph BT; A["Eigen::internal::igamma_der_a_retval< Scalar >"] --> B["Eigen::internal::igamma_retval< Scalar >"]
```

The diagram illustrates an inheritance relationship between two Eigen internal functions. At the bottom is a gray-shaded box representing the base class, `Eigen::internal::igamma_der_a_retval< Scalar >`. A blue arrow points upwards from this box to a white box at the top representing the derived class, `Eigen::internal::igamma_retval< Scalar >`. Both boxes are divided into three horizontal sections, with the top section containing the class name and the remaining two sections being empty.
