

Eigen::internal::default
_packet_traits

```
classDiagram
    class DefaultPacketTraits["Eigen::internal::default_packet_traits"]
    class PacketTraits["Eigen::internal::packet_traits<int16_t>"]
    PacketTraits --|> DefaultPacketTraits
```

The diagram illustrates an inheritance relationship between two C++ classes. The base class, `Eigen::internal::packet_traits<int16_t>`, is represented by a grey-shaded box with three horizontal compartments. The top compartment contains the class name, while the two lower compartments are empty. The derived class, `Eigen::internal::default_packet_traits`, is represented by a white box with three horizontal compartments. The top compartment contains the class name, and the two lower compartments are also empty. A blue arrow with an open triangular head points from the top of the base class box to the bottom of the derived class box, indicating that `Eigen::internal::default_packet_traits` inherits from `Eigen::internal::packet_traits<int16_t>`.

Eigen::internal::packet
