

Eigen::internal::default
_packet_traits

The diagram illustrates the inheritance of packet traits in Eigen. At the bottom is a grey box representing the base class `Eigen::internal::packet_traits<int32_t>`. Two blue arrows point upwards from this box to a white box above it, representing the derived class `Eigen::internal::default_packet_traits`. Both boxes are divided into three horizontal sections. The top section of each box contains the class name, while the bottom two sections are empty, representing a template class structure.

Eigen::internal::packet
_traits< int32_t >
