

Eigen::internal::default
_packet_traits

```
graph BT; A["Eigen::internal::packet_traits< uint16_t >"] --> B["Eigen::internal::default_packet_traits"]
```

The diagram illustrates an inheritance relationship between two C++ traits objects. At the bottom is a grey-shaded box representing `Eigen::internal::packet_traits< uint16_t >`, which is divided into three horizontal sections. A blue arrow points upwards from the top section of this box to the bottom section of a white box above it. The white box represents `Eigen::internal::default_packet_traits` and is also divided into three horizontal sections. This visualizes that `default_packet_traits` inherits from `packet_traits< uint16_t >`.
