

Eigen::internal::default
_packet_traits

```
graph BT; A["Eigen::internal::packet_traits< uint64_t >"] --> B["Eigen::internal::default_packet_traits"]
```

The diagram illustrates an inheritance relationship between two C++ struct types. At the bottom is a grey-shaded box representing the base struct, `Eigen::internal::packet_traits< uint64_t >`. It is divided into three horizontal sections, with the top section containing the text. A blue arrow points upwards from the top of this box to the bottom of a white box above it. The white box represents the derived struct, `Eigen::internal::default_packet_traits`, which is also divided into three horizontal sections, with the top section containing its text.

Eigen::internal::packet
_traits< uint64_t >
