

Eigen::internal::default
_packet_traits

```
graph BT; A["Eigen::internal::packet_traits< uint8_t >"] --> B["Eigen::internal::default_packet_traits"]
```

The diagram illustrates an inheritance relationship between two C++ struct types. At the bottom is a grey-shaded box representing the base class, `Eigen::internal::packet_traits< uint8_t >`. It is divided into three horizontal sections, with the first section containing the text. Above it is a white box representing the derived class, `Eigen::internal::default_packet_traits`, also divided into three horizontal sections, with the first section containing its text. A blue arrow points from the top of the base class box to the bottom of the derived class box, indicating that the derived class inherits from the base class.

Eigen::internal::packet
_traits< uint8_t >
