

Eigen::internal::traits
< ExpressionType >

```
graph BT; A["Eigen::internal::traits<ForceAlignedAccess<ExpressionType>>"] --> B["Eigen::internal::traits<ExpressionType>"]
```

The diagram illustrates a C++ template specialization relationship. At the bottom is a gray box representing the base template specialization: `Eigen::internal::traits<ForceAlignedAccess<ExpressionType>>`. It has two empty rectangular slots below the text. Above it is a white box representing the derived template specialization: `Eigen::internal::traits<ExpressionType>`. It also has two empty rectangular slots below the text. A blue arrow with a triangular head points from the top of the gray box to the bottom of the white box, indicating that the gray box inherits from the white box.
