

Eigen::internal::traits
< MatrixType >

```
graph BT; A["Eigen::internal::traits< SparseSelfAdjointView< MatrixType, Mode > >"] --> B["Eigen::internal::traits< MatrixType >"]
```

The diagram illustrates an inheritance relationship between two Eigen traits classes. At the bottom is a grey-shaded box representing the base class: `Eigen::internal::traits< SparseSelfAdjointView< MatrixType, Mode > >`. A blue arrow points upwards from this box to a white box at the top representing the derived class: `Eigen::internal::traits< MatrixType >`. Both boxes are divided into three horizontal sections, with the top section containing the class name and the remaining two sections being empty.
